1. Overview

Scheduled BYOK export of Odoo tables to your Postgres / BigQuery / Snowflake

Push selected Odoo models to your OWN data warehouse on a schedule so your BI tools can reach the data without hammering Odoo. Bring-your-own-key: you supply the target connection; nothing is hosted by us.

2. Key Features

- Sync targets for PostgreSQL (live, via psycopg2), plus BigQuery and Snowflake
- Per-target table definitions: pick a model, choose fields, optional domain filter.
- Full-refresh or incremental (by write_date watermark) sync modes.
- Automatic DDL: creates / aligns the destination table for PostgreSQL targets.
- Batched reads with configurable batch size; type-mapped column generation.
- Run history with row counts, duration, status and error capture.
- Daily/hourly cron plus a manual "Run Now" wizard.

3. How to Use

Install the module from Apps, then open its menu from the Odoo top bar. Configure the settings, then use the documented screens to run your workflow.
