Shopify / WooCommerce Ord

User Guide · Odoo 18.0 & 19.0

BYOK order import and stock sync for Shopify and WooCommerce stores

pokutsoft.com

1. Overview

Shopify / WooCommerce Order & Stock Sync (BYOK)
==========

A bring-your-own-key connector that imports e-commerce orders into Odoo and pushes Odoo stock levels back to your storefront - for both Shopify and WooCommerce - without an Enterprise subscription.

Key features ---------- * Store connections with your own API keys (Shopify Admin token / WooCommerce consumer key+secret). Credentials are validated and never shared. * SKU-based product mapping with auto-match by internal reference plus a manual mapping table for the awkward cases. * Order import: external orders become Odoo sale orders (customer auto-created from the billing contact, lines matched by SKU, taxes/shipping captured), idempotent on the external order id so re-runs never duplicate. * Stock export: on-hand quantities for mapped products are pushed to the store, with a configurable warehouse source and a dry-run preview. * Full sync log: every run records what was imported/exported, what was skipped and why, so failures are debuggable. * Scheduled sync via cron, plus manual run buttons and a guided wizard.

This module ships the complete mapping, queuing, idempotency and logging engine. Live HTTP calls use the credentials you provide; the request/response handling, payload building and parsing are all implemented here and exercised by tests through an injectable transport so the logic is verifiable offline.

2. Installation

Open Apps, click Update Apps List, search for “Shopify / WooCommerce Ord” (technical name **gb_shopify_woocommerce_order_stock_sync**) and press Install. The module supports Odoo 18.0 and 19.0, Community and Enterprise.

3. Menus & Navigation

After install the following menus become available:

- E-com Sync
- Stores
- Run Sync
- Product Mapping
- Sync Logs

4. Feature & Data-Model Reference

The app implements the following records and engines:

Model	Purpose
gb.ecom.sync.log	E-commerce Sync Log
gb.ecom.store	E-commerce Store Connection
gb.ecom.product.map	E-commerce Product Mapping
gb.ecom.stock.export	E-commerce Stock Export Engine

gb.ecom.transport	E-commerce HTTP Transport
gb.ecom.order.import	E-commerce Order Import Engine
gb.ecom.sync.run.wizard	Run E-commerce Sync

5. Typical Workflow

1. Open the app's Configuration menu and set up the master data / policies it needs.
2. Create the main operational record from its primary menu.
3. Use the action buttons on the form (e.g. Confirm / Compute / Post / Generate) to run the engine.
4. Review the results in the list, pivot and report views; export or post where applicable.

6. Support

Email **support@pokutsoft.com** or visit **https://pokutsoft.com**. Please include your Odoo version (18.0 / 19.0) and the module technical name.
